DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-8, 16 and 23, drawn to a pharmaceutical preparation for treating rheumatic syndromes comprising: sulfur, mustard seed and a cupric salt, and a method of making thereof, classified in class 424, subclass 755, for example.
- II. Claims 17-22, drawn to a process for producing a pharmaceutical preparation useful for the treatment of rheumatic syndromes, wherein the process comprises the steps of: mixing components comprising talc and sulfur into a product form; and adding catalytic powder to the powder form; wherein the catalytic powder is a pulverulent mixture comprising talc, mustard seed and copper sulfate, classified in class 424, subclass 46, for example.
- III. Claims 24-27, drawn to a method for treating a disorder, wherein said method comprises the step of administering to a human the pharmaceutical preparation of claim 1, and wherein the disorder is sciatica, muscular rheumatism, arthritis, phlebitis, excessively high of low blood pressure, paralysis deformans, paralysis post myelitis, poliomyelitis, paralysis cerebralis, paralysis post nephritis vel uraemia, paralysis following or induced by injury, lesions, surgical procedures or impact,

Art Unit: 1654

eczema, or x-ray-induced burns, classified in class 514, subclass 825 or class 514, subclass 861, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the process for using the product as claimed can be practiced with another materially different product. For example, in U.S. Patent 6,358,941, Sorenson et al. teach a method of treating rheumatic syndromes comprising administering to patients cholinesterase inhibitors.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process, as evidenced by the claims themselves. For example, the product as claimed does not require that the ingredients contained therein are prepared by a process comprising mixing the talc and sulfur into a powder form, and adding a pulverent catalytic powder mixture to the powder form. The product only requires that the ingredients of sulfur, mustard seed and cupric salt be combined.

Application/Control Number: 09/889,752

Art Unit: 1654

This application contains claims directed to the following patentably distinct species of the claimed invention: the distinct disorders of Claim 24.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 1, 2, and 7 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1654

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

* Applicant is advised that the <u>cited</u> U.S. patents and patent application publications are available for download via the Office's PAIR. As an alternate source, <u>all</u> U.S. patents and patent application publications are available on the USPTO web site (<u>www.uspto.gov</u>), from the Office of Public Records and from commercial sources. Should you receive inquiries about the use of the Office's PAIR system, applicants may be referred to the Electronic Business Center (EBC) at http://www.uspto.gov/ebc/index.html or 1-866-217-9197.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michele Flood whose telephone number is 571-272-0964. The examiner can normally be reached on 7:00 am - 3:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell can be reached on 571-272-0974. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
